Newly Revised
The Council of Christian Colleges and
Universities Series

Stressing the biblical message of stewardship, biologist Richard T. Wright celebrates the study of God's creation and examines the interaction of the life sciences with society in medicine, genetics, and the environment. The author brings a biblical perspective to theories on origins, contrasting creationism, intelligent design, and evolution. Highlighting the unique nature of biology and its interaction with Christian thought, Wright demonstrates that Christian

stewardship can be the key to a sustainable future.

This comprehensive work, one of a series cosponsored by the Council for Christian Colleges and Universities, addresses the needs of the Christian student of biology to align science and faith. It demonstrates that the study of biology penetrates to the core of human existence and has much to contribute to the construction of a consistent Christian worldview.
